Objective and Investment Policy

The objective of the Sub-Fund is to track the performance of the index "MSCI World Minimum Volatility Select ESG Low Carbon Target Index" (the "Index"). The Sub-Fund aims to achieve a level of tracking error of the Sub-Fund and its Index that will not normally exceed 1%.

Risk Indicator (Source : Fund Admin)

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

Benchmark volatility	8.20%	-	9.71%
Ex-post Tracking Error	0.11%	-	0.11%
Sharpe ratio	0.12	-	0.29

* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Index Data (Source : Amundi)

Description of the Index

The Index is an equity index based on the MSCI World Index, representative of the large and mid-cap stocks across developed markets countries (the "Parent Index"). The Index is designed to represent the performance of a strategy that seeks systematic integration of environmental, social and governance ("ESG") characteristics along with the minimum volatility factor (i.e. stocks which exhibit less price variability than the broad market).

The index is constructed by selecting constituents of a market capitalization weighted index and applying an optimization process that aims to minimize the total risk, reduce the carbon-equivalent exposure to CO2 and other greenhouse gases ("GHG") by thirty percent (30%) and improve the weighted average industry-adjusted ESG score of the index with respect to its Parent Index.

The Index is a net total return index, meaning that dividends net of tax paid by the index constituents are included in the Index return. For further details, please refer to the Index methodology available on msci.com.
