Objective and Investment Policy

The Fund is a passively managed index-based UCITS. The Fund's objective is to be inversely exposed with a daily rebalancing to the Italian stock market by replicating, both upwards and downwards, the performance of the FTSE MIB Super Short Strategy RT Gross TR strategy index (gross dividends reinvested) (the "Benchmark"), denominated in euro (EUR) and which is a short selling strategy (with a daily -2x leverage effect), with daily rebalancing, on the FTSE MIB® index (net dividends reinvested) (the "Parent Index"), by measuring the development of the 40 largest stocks listed on the Borsa Italiana while minimising the tracking error between the Fund's performance and that of the Benchmark. The expected level of the Tracking Error under normal market conditions is indicated in the Fund prospectus. Over a period of one working day, any appreciation in the value of the Parent Index shall lead to stronger depreciation of the net asset value of the Fund, meaning that investors will therefore not benefit from the appreciation in the value of the Parent Index. However, for a period greater than one working day, due to the daily leverage readjustment conducted in the Benchmark, the performance of the Fund will not be equal to double the inverse of the performance of the Parent Index and may even follow an identical (i.e. not inverse) development. The FTSE website (www.ftse.com) provides more detailed information about FTSE indices. The Fund aims to achieve its objective by means of indirect replication, namely by entering into one or more OTC swaps (forward financial instruments, "FFIs"). The Fund may invest in a diversified portfolio of international shares whose performance will be exchanged against that of the Benchmark through FFIs. The updated composition of the portfolio of securities held by the Fund is mentioned on the website amundiETF.com. In addition, the indicative net asset value appears on the Fund's Reuters and Bloomberg pages and may also be mentioned on the Fund's stock exchange websites.

Spread	0.60%	0.19%	-0.24%	-0.68%	-0.35%	-0.63%	-0.48%	-1.00%	-0.60%	-0.73%

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Risk indicators (Source: Fund Admin)

	1 year	3 years	Inception to date *
Portfolio volatility *	30.80%	32.76%	46.34%
Benchmark volatility	30.81%	32.76%	-
Ex-post Tracking Error	0.18%	0.15%	-
Sharpe ratio	-1.31	-1.27	-0.58

* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

EQUITY

Risk Indicator (Source : Fund Admin)

We have classified this product as 6 out of 7, which is the second highest risk class. This rates the potential losses from future performance at a high level, and poor market conditions are very likely to impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances. This product does not include any protection from future market performance so you could lose some or all of your investment. Beside the risks included in the risk indicator, other risks may affect the Sub-fund's performance. Please refer to the MULTI UNITS FRANCE prospectus.

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 1 Day. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

Index Data (Source : Amundi)

Description of the Index

The FTSE MIB Super Short Strategy RT Gross TR Index attempt to replicate the inverse returns experienced by an investor attaining the negative daily performance of the underlying headline index i.e. by short selling the index with a daily rebalance. The cost of dividends and benefit of earning interest for the short position are taken into account in the index calculation of the short indices, as is the cost of borrowing stock. The short indices are derived from the existing underlying headline Total Return Indices.
